

Numpy.NET

<https://github.com/SciSharp/Numpy.NET>

Python's Numpy Library provides a lot of functionalities for scientific computing, machine learning and AI. It has also a .NET binding that is called Numpy.NET. In this repository, I have just played with different functions of this library and shown that working with Numpy.NET is very much similar as with Python's Numpy library. It is also shown that how easy it is to convert a C# array to a Numpy array and vice versa.
